

Michaël LAUNAY

Entrepreneur & Senior Software Architect
IA – Collaborative Systems - Open Source

Former founder and manager of an innovative company with €3M turnover, 4 FTEs, and an average of €1M in R&D tax credits and innovation tax credits over twenty years.

Born 19 January 1973, married, 2 children

Expertise, Innovation & Knowledge Sharing

Senior Software Architect & Entrepreneur

Founder of [Ecréall SARL](#) in 2005, then [Logikascium](#) in 2023, I have 25 years of experience in software engineering, including 15 years dedicated to managing innovative projects involving R&D.

I support organisations from needs analysis to the deployment of complex collaborative systems, ensuring that technical choices remain aligned with business strategy.

Technical Expertise & AI

Specialised in distributed systems and **GNU/Linux** environments, including DevOps and open source technologies, I have strong expertise in **Python** and **C++** architectures.

My current focus is on **AI applied** to document processing and business workflows: OCR, RAG, augmented workflows and semantic search.

Passionate about knowledge management, I experiment with the concept of a “**second brain**” assisted by **local LLMs**, deployed via Docker and OpenClaw, within the Obsidian environment.

R&D Management

With solid experience as a business manager, notably within **Ecréall SARL**, a four-person company, I master the full contractual cycle: from negotiation and intellectual property to operational maintenance.

I have supervised several DevOps and R&D teams, including CIFRE PhD projects. I have also prepared ANRT funding applications and obtained JEI status.

Teaching & Knowledge Transfer

Since 2019, I have worked as a part-time lecturer at **ENSAM, Polytech Lille and the University of Lille**, teaching the fundamentals of software engineering and Python programming.

I supervise experimental Master's-level projects based on a rigorous engineering approach, including UML, Agile UP and Design Patterns, while integrating a reasoned, ethical and traceable use of AI.

Professional Experience

Since 2023

Founder and Manager, EURL [Logikascium](#).

- Design and development of [Alirpunkto](#), an open-source identity verification solution intended to support the admission of new members into a European participatory network.
- Writing of [technical documentation and computer science courses](#).
- Meetups and training sessions on the use of **generative AI** for software development.
- Biblioteko: educational project for transforming scanned documents into usable content through a hybrid local/cloud **OCR** pipeline, using Mistral OCR and Gemini, with intelligent document segmentation.

2005-2023

Founder and Manager, SARL Ecréall.

- Methodology for developing collaborative portals using UML and BPMN.
- Obtained JEI (startup) status in 2010; prepared ANRT and tax ruling applications.
- Conference presentations and publication of an [article](#) in *Linux Pratique*.
- Writing of documentation and delivery of training courses on GNU/Linux Ubuntu administration, Python development and Plone (see my [github](#)).
- Client relationship management for collaborative portal projects for HDFID, Bonduelle, CRT Hauts-de-France, MESHS and Bluenove.
- **Security** : Iptables, fail2ban, postfix (spf, dkim, dmarc), nmap, tcpdump, wireshark.

2001-2004

Software Developer – Sofrelog / EADS

Development in C++ of a cartography editor.

1997-2000

Software Developer – Thomson-CSF / Thales

Development in C++ of a simulator.

Education

Since 2016 Various MOOCs on Fun-MOOC, Udemmy and Elephorm.

1997 Engineering degree in Computer Science, Measurement and Automation
École Universitaire d'Ingénieurs de Lille Now Polytech Lille.

1994 DUT in Electrical Engineering and Industrial Computing
IUT de Cachan.

1992 Baccalauréat F2, with honours.

Languages

English: reading, speaking and writing.

Esperanto: reading, limited speaking and writing.

Languages, Methods, Technologies & Communication

Areas of Expertise

Collaborative portals, workflows, Linux, Python, Docker.

Methodologies

Agile methods, model-driven engineering, TOGAF.

Documentation

Obsidian, Markdown, Mermaid and PlantUML.

Programming and Modelling Languages

C++, Bash, Python, JavaScript, XML, UML, BPMN.

Frameworks

Bootstrap, React.

3D Modelling

SketchUp, Blender, Sweet Home 3D, FreeCAD.

Prototyping

Electronics, Raspberry Pi.

Personal Interests

Reading, walking, French boxing instructor, and self-building of a bioclimatic house.
